

IMC University of Applied Sciences Krems

Title: Documentation for Assignment 1
Course: WS25/26 Informatics / Web Studies

Name: Hyusein Rashid

Date: 06.11.2025

This personal webpage for assignment 1 showcases my profile, including personal, creative content. The aim was to demonstrate HTML & CSS skills, semantic structure, navigation, and responsive design.

1. File Structure: (I used “**tree /f /a**” in command line on command line on Windows for this structure). All images are inside the **images/** folder and the global css file is in the **css/** folder.

2. Page descriptions:

a. index.html

Description:

The homepage welcomes visitors and introduces me as an Informatics student. It includes a navigation bar linking to all other pages, a hero section with a short intro and call-to-action buttons, and featured sections highlighting my journey, gallery, and CV.

Structure:

- Header & Nav: Main navigation with active link for the current page.
- Main: Three sections - Hero (intro + buttons), Featured (3 info cards), and Showcase (featured cat image + caption).
- Footer: Simple copyright text.

Notes:

- Uses semantic tags (header, nav, section, article, footer).
- Includes CSS animation and responsive layout.
- Images from Pinterest (credited).

h2>b. about.html

Description:

This page gives personal background information about me - who I am, my interests, and career goals. It uses sections to organize my profile, hobbies, and aspirations clearly.

Structure:

- Header & Nav: Same navigation as other pages, with “About” highlighted.
- Main:
 - About Header — Profile picture and short intro.
 - Interests — Grid with three topics (Coding, Gaming, AI).
 - Career Goals — Personal goals and call-to-action buttons to Gallery and CV.
- Footer: Copyright text.

Notes:

- Uses semantic HTML and ARIA labels for accessibility.
- Profile image and grid layout styled with external CSS.
- Consistent design and responsive structure.

c. cv.html

Description:

This page presents my professional information - including education, skills, experience, and languages - in a simple and readable format.

Structure:

- Header & Nav: Same global navigation, with “CV - Resume” highlighted.
- Main: Contains a heading and a section listing personal details, education, skills, and experiences in bullet format.

- Footer: Copyright notice.

Notes:

- Minimal and clear layout for readability.
- Consistent design with other pages through shared CSS.
- Uses semantic tags for structure and clarity.

d. gallery.html

Description:

The gallery page displays a neat, responsive collection of images with hover effects, maintaining a cohesive design consistent with the rest of the website.

Structure:

- Header & Nav: Same global navigation, with “Gallery” highlighted.
- Main: Page heading, introductory text, and a grid of images with descriptive alt text.

- Footer: Copyright notice.

Notes:

- Responsive grid layout for images.
- Consistent design with other pages through shared CSS.
- Includes accessibility features like alt text for all images.

e. contact.html

The desktop view of the contact.html page features a dark blue header with navigation links: Home, About, Gallery, CV - Resume, and Contact (highlighted in red). The main content area has a light yellow background. The contact form is titled "Contact Me" and includes a brief instruction: "If you would like to get in touch with me, please fill out the form below, or you can send me a text:". Below this, the contact information is listed: "Phone number: +43 676 1234567" and "Email: hsynrsdd@gmail.com". The form itself consists of three input fields: "Name:" (with placeholder "e.g. John Doe"), "Email:" (with placeholder "e.g. example@gmail.com"), and "Message:" (with placeholder "e.g. I would like to discuss the project..."). At the bottom of the form are two buttons: "Send" and "Reset".

The mobile view of the contact.html page shows a dark blue header with the same navigation links, but the "Contact" link is more prominent. The main content area is also light yellow. The "Contact Me" heading is followed by the same instruction and contact information. The form fields are stacked vertically, and the "Send" button is at the bottom, with the "Reset" button removed for better mobile usability.

Description:

This page allows visitors to contact me via a form, phone number, or email. It provides a simple and clear way for users to reach out.

Structure:

- Header & Nav: Same global navigation, with "Contact" highlighted.
- Main: Page heading, contact info (phone/email), and a contact form with name, email, and message fields.
- Use of <form> for the entire page.
- Footer: Copyright notice.

Notes:

- Form uses mailto: to send messages via email.
- All input fields are required and include placeholders.
- Buttons styled via CSS; design inspired by online snippet.
- Consistent layout and design with other pages.

3. Design & Features:

- Consistent navigation bar and footer across all pages for easy usability.
- Responsive design using CSS to ensure content adapts to different screen sizes.
- Semantic HTML structure (header, nav, main, section, article, footer) for clarity and accessibility.
- Visual enhancements: hover effects on gallery images, call-to-action buttons, and minimal CSS animations.
- Accessibility considerations: alt text for images and ARIA labels for better screen reader support.

4. References and notes:

- Image sources: Pinterest (credited in pages).
- CSS button design inspired by uiverse.io snippet
- All external sources for HTML/CSS snippets were short examples only, fully credited in code comments. I have only taken the button in the contact form as a snippet, everything else was googled and looked up, I visited multiple sites to find out.
- Tested on multiple browsers and screen sizes to ensure consistency and functionality.

5. Conclusion:

This webpage demonstrates the practical application of HTML & CSS, including semantic structure, navigation, responsive design, and user experience considerations.
